### REC\_DS using C\_Week 2\_COD\_Question 4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

##### ***Input Format***

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

### **Output Format**

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

10 20 30 40 50

Output: 10 20 30 40 50

### **Answer**

```
// You are using
#include<stdio.h>
#include<stdlib.h>
```

```
struct Node{
    int data;
    struct Node* prev;
    struct Node* next;
};
```

```
struct Node* createNode(int data){
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
    newNode->data = data;
    newNode->prev = NULL;
    newNode->next = NULL;
    return newNode;
}
```

```
void insertEnd(struct Node** head,int data){
    struct Node* newNode = createNode(data);
    if(*head == NULL){
        *head = newNode;
        return;
    }
}
```

```

    struct Node*temp = *head;
    while(temp->next != NULL){
        temp = temp->next;
    }
    temp->next = newNode;
    newNode->prev = temp;
}

void display(struct Node* head){
    struct Node* temp = head;
    while(temp != NULL){
        printf("%d ",temp->data);
        temp = temp->next;
    }
}

int main()
{
    int N;
    scanf("%d",&N);

    struct Node* head = NULL;
    for(int i = 0; i < N;i++){
        int id;
        scanf("%d",&id);
        insertEnd(&head, id);
    }
    display(head);
    return 0;
}

```

**Status :** Correct

**Marks :** 10/10
