REC_DS using C_Week 7_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
```

```
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
    table[i] = -1;
  }
}
int linearProbe(int table[], int size, int num) {
  int idx = num % size;</pre>
```

```
if (idx < 0) idx += size;
     while (table[idx] != -1) {
         idx = (idx + 1) \% size
      return idx;
    }
    void insertIntoHashTable(int table[], int size, int arr[], int n) {
      for (int i = 0; i < n; i++) {
         int num = arr[i];
         int idx = num % size:
         if (idx < 0) idx += size;
           table[linearProbe(table, size, num)] = num;
        if (table[idx] == -1) {
         } else {
    }
    int searchInHashTable(int table[], int size, int num) {
      int idx = num % size;
      if (idx < 0) idx += size:
      int probed = 0;
      while (probed < size && table[idx] != -1) {
         if (table[idx] == num) {
           return 1;
         idx = (idx + 1) \% size;
         probed++;
      return 0;
    int main() {
scanf("%d %d", &n, &table_size);
```

```
240801311
for (int i = 0; i < n; i++)
scanf("%d". &arr[:1\)
       int arr[MAX], table[MAX];
         scanf("%d", &arr[i]);
       initializeTable(table, table_size);
       insertIntoHashTable(table, table_size, arr, n);
       int q, x;
       scanf("%d", &q);
       for (int i = 0; i < q; i++) {
         scanf("%d", &x);
         if (searchInHashTable(table, table_size, x))
            printf("Value %d: Found\n", x);
         else
            printf("Value %d: Not Found\n", x);
       return 0;
     Status: Correct
                                                                               Marks: 10/10
